

The blue area is the print area (1650mm x 600mm). There is no need for a bleed at the side edges or top but a 50mm bleed is required at the bottom.

Please keep all important information such as text, logo's etc well within the grey area (1530mm x 580mm) This is to allow for the gripper bar which holds the banner in place at the top which covers between 5 and 20mm of the print area at the top. It also allows for slight variations in pole height which affects the image height at the bottom.

The black area is what we call a tongue which is used to attach it the retracting mechanism this area can be left white or any colour you like as it is not visible.

Using this template at the correct scaling of 1750mm high by 600mm wide should see your banner printed correctly

Resolution should be at least 150dpi

Refer to the TENJI Artwork guidelines for further information such as file types and upload link.

Extend background images to at least 50mm below this line
